

SUMMER COOL DOWN FANS

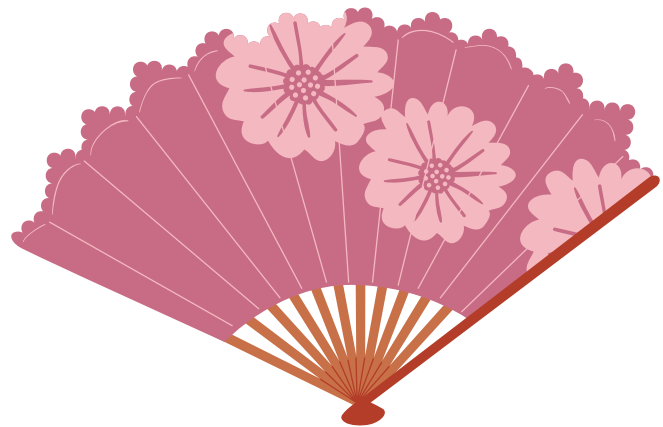

Lesson of the Day:

You have the power to make change! It's too hot? Make a fan and use it to cool yourself and others down. Do you see a problem around you? How can you solve it? If you can't all the way solve it, how can you make it better for yourself and others around you?

Materials:

- Paper (regular or construction)
- Paint or other coloring materials!
- Popsicle sticks
- Scissors
- Glue (hot glue)

Instructions:

1. Discuss the lesson of the day with your students. Talk about what it means to them.
2. Use rainbow popsicle sticks, or have students color in plain ones..
3. Use around 5 popsicle sticks per fan. Hot glue them together at the base to create the fan shape.
4. Trace a fan shape on students paper.
5. Have students paint fruit shapes in the fan shape.
6. Once dry, cut out the fan shape and glue to the popsicle sticks.
7. Fold! (Regular paper is more likely to fold flat, construction paper may not fold all the way flat.)
